

This is a basic development plan to fund, prototype; sell a solution to provide capability requirements to support population assistance and relief, as an aftermath to any disaster be it natural, man made or terrorism.

This paper, idea, plan is the property of Norman Duncan, and is dated January 19, 2010. The concept will be known as:

**DISASTER DISTRIBUTION SYSTEM
RELIEF ON WHEELS
Trade name: DIDI CONTAINER INDUSTRIES**

The design will feature units outfitted for airlift to reach impassable locations. We will build containerized fully equipped operating rooms that can be airlifted to isolated areas.

Our special containers will have a complete kitchen, with stoves and refrigeration for feeding and to provide a hot meal.

A food distribution container with lockable shelves and a water distribution storage unit will enable the distribution of canned and packaged meals where electrical facilities remain intact.

A motel type container for personnel to be housed supporting the involved mission to include a shower stall.

A container designed to accommodate deceased victims with refrigeration.

All of these DIDI units will be transportable by road and air. A hitch will be attached to a special cross section of DIDI units for road movement. Each container will have at least four corner hooks; the largest and heaviest will have six hooks for lifting by capable helicopters. Units can be loaded into military airlift for delivery to the closest airport to the event.

Potential customers, the military, Homeland Security, Red Cross, medical missions, foreign governments, indigenous governments in their pre-planning to stockpile for any catastrophe.

Our need is a capital partner who has the same vision as the presenter of this idea to develop this much-needed infrastructure as a business and humanitarian venture.

DIDI CONTAINER INDUSTRIES

In addition to the uses of a DIDI container, we would have unlimited possibilities to expand content to deliver and support any disaster.

Some added capability:

- Power Station DIDI
- Radio-TV transmission DIDI
- Auxiliary Telephone System DIDI
- Command Post DIDI
- Fire and Police Headquarters DIDI
- Temporary Prison Lockup DIDI
- Internet/Computer Support DIDI
- OMNILERT Notification DIDI

Potential customer list should include the United Nations who not only would require these support DIDI's should it be necessary for troops to be allocated to an overseas area for security.

In essence, our program is simply defined as follows:

Manufacturing of boutique equipped metal containers for storage and movement by all transportation modes to domestic and worldwide locations as portable relief stations.

Exceptional Quality of Life as I see Loudoun County

Arts

Symphony Orchestra

Baseball stadium under construction

Recreation-Trump and other golf courses

Shopping malls-fine grocery markets

Fine dining

Wineries

Convenient road network

Proximity to Washington DC

Major world access via Dulles Airport

Warehousing and a vibrant real estate market

Residential areas

Fine schools

New METRO service under construction

National conference facilities

Fine hotel properties

Home of the Washington Redskins

Future home of GMU

GW and Shenandoah Universities, No. Va Community College, Strayer College

Loudoun Hospital and an extended cadre of doctors

Future Hospital planned for Rt 50 area

Howard Hughes Research facility

Domiciled major organizations such as Visa, AOL, Raytheon, Verizon. Telos,
Orbital

Churches of all denominations

Workforce from the entire metropolitan area

Senior Living Facilities

A team of local newspapers

County non-profit TV channels

And an active and vibrant

Economic Development Commission

And

Chamber of Commerce
